

With an incredible selection of high quality Jensen or Argent alloys, LK Dental Studio has crafted fantastic, strong, and esthetic PFM's for every clinical situation. Our high end porcelain, Noritake EX-3, has a perfectly matched coefficient of thermal expansion to all our alloys to ensure long term fracture resistance.

If you have not experienced a Noritake crown, you honestly need to try one. With a brilliant chameleon effect created by the luster layer of porcelain, Noritake crowns blend in with natural dentition like no other porcelain. The inherent low value of Noritake porcelain, along with a slightly more intense chroma will deliver that “wow” effect you have been searching for. Try one, you will not be disappointed!
